Skillmine
Technology • Consulting • Services

We are a new generation IT Consulting & Managed Services provider, helping our customers to optimize their IT investments. We engage with customers to unearth bottlenecks in the current IT operating ecosystem. We now have few fortune-100 customers in our clientele.

We have found the most number of **bugs** and the enhancements during our recent work engagements.

We are set to manage and run the pre-sales, consulting engagement and global implementations, running the entire technology as whole, for one of the most innovative Indian start-up and fastest growing SD-WAN in world, **Lavelle Networks.**

We have tied up to initiate and implement **Hx-central**, hospital operations management system, in large hospitals across India, Asian and middle-east region.
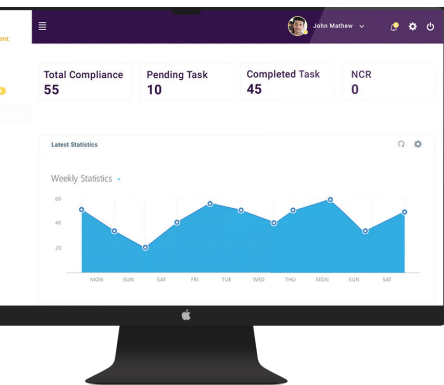

We are the R&D partner, deploying the technology of **Rubric** and doing consulting on the backup technology for India for one of the fastest growing backup implementing organization in world, with 3.3.B dollar growth in past 4 years.

New Wins

- Started comprehensive IT Assessment to derive deep-dive Observations and Develop & Design the future IT Strategy & Technology Roadmap for the number one bank in Kerala, being the first co-operative bank to have 8-8 core banking.

- Got engaged to provide consulting services for a premier supply chain organization known worldwide with more than 40 years of experience in global production, sourcing and logistics.

- Providing consulting services for an American multinational computer technology corporation- the no. 1 provider of business software, and for a British multinational groceries and general merchandise retailer which is the third-largest retailer in the world.

- Kick-started the INSEED program with a Japanese multinational corporation. INSEED is an honest attempt to execute our strategic investments to realize the Incubation Programme and create a Centre Of Excellence (CoE) for IT Information Security along with a state of the art LAB in collaboration with Industry Experts and Tech Gurus.

Think & Care about Customer's Investment   *Predictable Delivery Every Time since First Time*   *Passionate About Desired Outcome*

What's New?

We have launched our new product: **COMPLY**ment

COMPLYment is a Compliance Management System. It helps managing compliance by configuring and monitoring compliance tasks across organizations. It reminds stake-holders of approaching tasks and felicitates global audit.

COMPLYment provides flexibility for managing and tracking the necessary compliances as per various standards like PCI, ISO, HIPAA etc. It is designed to simplify the gap analysis process and required mitigation, to attain the desired compliance level for organizations.

Visit us at : **www.complyment.com**

We are now **ISO/IEC 20000-1: 2011 and ISO/IEC 27001: 2013** certified. This achievement stands intact to demonstrate our commitment to provide a high quality and strong customer service.
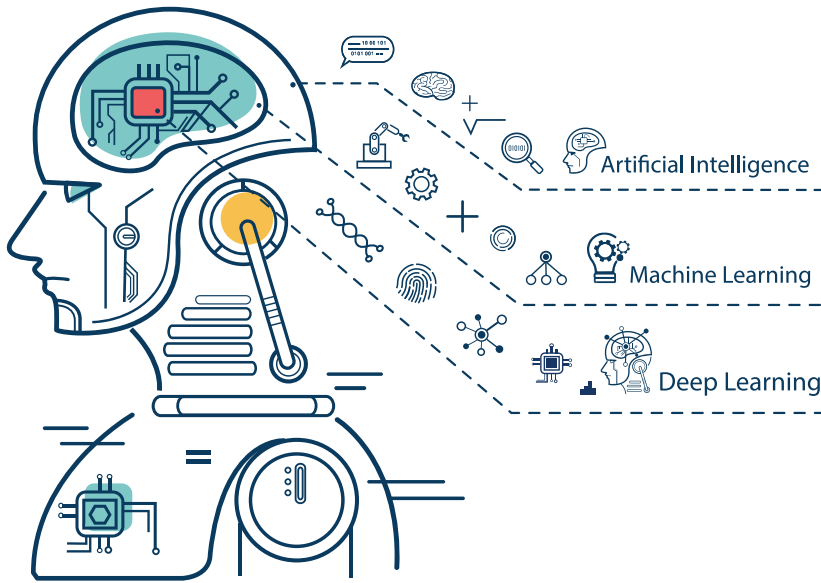

We shall serve you with the best solutions!

We have moved our **Headquarter** to a new location in **Bangalore** with a view to expand and build credibility for the forthcoming business opportunities w.e.f. 01 March'19.

Skillminers had a blast at their 5th anniversary celebration- **BOOMERANG' 2019:** the celebration of Skillmine's journey of success.

AI Driven Development

AI driven development focuses on tools and technologies in order to embed that AI into the application. The trend in AI has been evolving and the tools, which are used to develop AI-powered solution, are expanding rapidly.

The demand of today is for the application developers to be able to operate AI-enhanced technologies independently. To enable the developer to leverage these technologies without prior expertise, they require the assistance of professional data scientists to build AI-enhanced solutions. According to Gartner, "this provides the developer with an ecosystem of AI algorithms and models, as well as development tools tailored to integrating AI capabilities and models into a solution."

"Ultimately, highly advanced AI-powered development environments automating both functional and nonfunctional aspects of applications will give rise to a new age of the 'citizen application developer' where nonprofessionals will be able to use AI-driven tools to automatically generate new solutions," said David Cearley, Vice President and Gartner Fellow in Gartner Research.

Traditional programming required months of planning and preparing to jump-start a project. Getting it to a prototype level to get more funding was another daunting step which needed essential resources. Now, through machine learning, this cycle can be shorted to a few lines of code or just a drag and drop.

Artificial Intelligence (AI) is included in the world's most advanced RPA platform, so that small business and developers can solve complex business processes using intelligent automation. Artificial intelligence and analytics will take the automation efforts to the next level, making businesses more efficient and people more productive.

More Insights

- There has been a 14X increase in the number of active AI startups since 2000
- Investment into AI start-ups by venture capitalists has increased 6X since 2000.
