

Skillmine Technovation 2019

Powered by Technology Driven by Innovation

Four Seasons Hotel Riyadh
at Kingdom Centre, Riyadh, KSA

Skillmine Technovation 2019 was the first successful conference of Skillmine held in Riyadh, KSA. The conference had very good interest from some of the lead customers around the cutting edge technologies which were demonstrated by Skillmine.

Skillmine Technovation 2019 was a striking convergence on the journey through the technology trajectory, referring to the key topics arising from technology mines to key trends and success stories.

The conference had brought together local cross-industry Leaders from Enterprise Organizations from across KSA. The objective of the event was to focus on a multitude of frontier Technologies to provide a deeper insight into some cutting edge Technology innovations and products related to AI/ML & Data Science, Automation and Analytics, AI-driven IT operations, Information Security, Compliance, Fraud Prevention & AML, etc.

The event brought a mindful convergence of Technology experts, research heads and industry captains with a house over 50+ key selected delegates. The event also sought to gather feedback around critical, technical, commercial and policy-related challenges that the businesses face.

Cyber Defense with Intelligence Response Automation

When you hear the term “cybersecurity automation,” what comes to mind? This form of automation is all about leveling the playing field between cybersecurity experts and cybercriminals. The goal is to reduce the number of threats by eliminating vulnerabilities through the prevention of known cyber threats and the identification of zero-day attacks.

Let’s drill down a bit more. Cybersecurity with Intelligence response automation is also about making data collection faster and more efficient, Bringing artificial intelligence (AI) and machine learning (ML) technologies and processes into the fold to increase organizations’ analytic capabilities and eliminating tedious, time-consuming non-cognitive tasks to free up IT security experts so they can focus on higher-priority responsibilities and tasks.

Investing in cybersecurity solutions and automation platforms is essential for all businesses – particularly as cybercriminals launch increasingly complex cyber-attacks. But what kind of tools and solutions are available?

Some examples of process automation solutions and platforms for cybersecurity include:

1. Robotic process automation (RPA)
2. Security orchestration automation & response (SOAR) and Endpoint Detection & Response (EDR)
3. Public key infrastructure (PKI), certificate and key management
4. MITRE Methodologies

Skillmine has now come up with an Intelligence response Automation platform that benefits each of these different cybersecurity automation solutions and contribute to improving efficiency, increasing cybersecurity effectiveness, reducing costs, and improving overall organizational processes. It is the only Open Data Platform that readily integrates with existing security tools to deliver comprehensive advanced cyber defense.

SKILLMINE - Predictable Delivery, Every Time since the First time

New Wins

1

Managed Infrastructure and Security services for a large Wealth Management company in India

2

Ongoing execution for a very large DevOps migration for large retail in the UK

3

Completed the PCI Compliance for Sama and a few of the customers in Saudi Arabia

4

Started new engagements with three new customers in Mumbai, India

Whats New ?

	BluSapphire is a next-generation SOC solution & the first and only unified cyber defense platform with intelligent response automation. It gets rid of silos by converging network, system, and endpoint-based multi-vector analysis.
	Smart Technology that Reduces costs & Fraud. a. Robotics: Robotics is a realtime anti-money laundering solution, providing Cross-Asset Class and Cross Regulation surveillance, integrating them into a single platform build on AIML. b. Dokstor: Dokstor is primarily an electronic AIML based KYC platform. Dokstor helps financial services companies to risk manage and automate the onboarding of customers.
	HxCentral, a cloud-based solution, helps hospitals reduce their medical errors and improve quality compliance and patient experience.
	Artificial Intelligence for IT Operations. VuNet provides 'narrative storyboards and contextual alerts' for real-time business and operational insights - all in a single pane of glass powered by an advanced correlation engine handling millions of transactions per day.

We are pleased to Introduce

Vishwa Kiran
Executive Vice President

We are delighted to inform about addition of Mr. Vishwa Kiran as Executive Vice President – Head of Enterprise Sales, to Skillmine family in Bangalore.

As engineer by education, Vishwa Kiran holds more than 25 years of technology experience in Product engineering, enterprise and large scale solutions architecture, full cycle software development and building innovation teams. He is a keen follower and champion of new technology and will drive our Strategic Customer Relationships.

Vishwa is based in Bangalore and can be reached on vishwa.kiran@skill-mine.com

Our Aspirations for 2020:

As we propel forward in the New Year, aware that there are always new challenges that lie ahead of us, Skillmine remains confident in the quality of services that we offer to meet these challenges head-on. And in keeping with that, We have come up with few aspirations for the year 2020.

- 💡 We aspire to grow geographically and after expanding into the middle east now we are expanding into setting up an office in London to tap into the UK market. We have hired resources with mixed culture from many other nationalities, a few of them are from Saudi, Egypt, Sudan, Srilanka, Zelalem – Ethiopia and etc.
- 💡 We are improving our service offerings by adding some niche products to it. These niche products are developed by Skillmine and some of them are in partnership with our key partners. One of the products, which we are developing is a very innovative AI/ML-based GRC tool which brings down the complexity of Governance Risk and Compliance from a security perspective. Other technologies are confidential which we are working on.
- 💡 We are driving more & more information sharing to our customers so we are revamping our service reporting & service review mechanism to build much more transparency so that we are able to generate more trust with our customers.
