

Arise, awake, stop not until your goal is achieved.

– Swami Vivekananda

To all the brave survivors and story tellers out there who have waded through the pandemic in 2020 and continue doing so in 2021, we are one in this!

We present to you the **Au-fait Summer Edition Newsletter 2021**. This newsletter shall keep you abreast on our latest news and wins. We are optimistic that you've enjoyed reading our winter edition newsletter as well.

We hope you've been enjoying the summer months, with plenty of sun around to get all of us up and active.

GPTW Certification

Great Place to Work Institute has honored Skillmine Technology Consulting with certification as a Great Place to Work. Skillmine had participated in a survey in January 2021 conducted by GPTW.

We're proud that we are recognized as a great place to work, our rich history of diversity, hard work, and economic vitality has contributed to who we are today.

Skillmine's Trust Index Score was **83** in the GPTW survey.

Trust Index score is the percentage of employees that shared a positive response across 56 different parameters.

We were accorded the following scores.

Credibility of Management

Respect for People

Fairness at the workplace

Pride

Camaraderie between people

NEW WINS

01

Our team that works on projects for UK's biggest retail giant has successfully upgraded Azure DevOps classic pipelines to YAML & delivered Tenable fixes to all 2700+ stores, spread across the UK. We have completed 5000+ deployments to the environment with latest business requirements and defect fixes.

We have been shortlisted to provide IT services for India's Central Bank for a long-term duration starting April'21. We are proud to start the enhancements on the SAP systems for this revered client.

02

03

We have been shortlisted to provide IT services for India's national payment services provider. We shall soon start work on enhancing their current Java Platforms.

Skillmine has started offering consulting services to India's largest mutual funds company which also happens to be the biggest public sector bank in India. Our team is working with them to orbit shift their current development testing and deployment processes for developing application software's.

04

05

Our infrastructure management team is managing out and out IT Infrastructure for one of the leading manufacturers of specialty chemicals.

We have just been signed up as an IT service provider to a global insurance service provider and also for one of India's largest financial Bond conglomerates.

06

07

Our Talent Acquisition team has scored multiple wins. The team has been expanded to cater for increased requirements being generated by Skillmine and enhancing the capabilities as an addition, to offer and provide better services to our clients.

WHAT'S NEW?

Skillmine has come up with our own headless CMS solution for customers to increase flexibility and scalability. It has a new standard in content management. The content creators are not stuck with the preprogrammed models offered by a traditional CMS. This content model breaks down content into individual elements such as, blog post headline or copy on a call-to-action button.

We have collaborated with one of the largest private banks in India for application development and staffing services.

We have improvised our talent acquisition operations to transition to a fully automated solution. This solution includes resource management system, application managements systems and encompasses various online tracking tools.

Skillmine has started work on multi cloud security for one of our niche banking clients. We are in the process of doing more cutting-edge work from a cloud security perspective on a multi cloud platform for them.

We have started a new stream of work for one of our large banking clients to start supporting their service now platforms. We are in the process of creating and building up a large team to automate and streamline the entire ITIL process within the new platform globally for this valued customer.

The Next Revolution of Corporate Functions – RPA

“The global economy is in the midst of a new industrial revolution”.

The business revolution is leading us closer to a world where people have more independence, and where most people are at the helm of their own companies. Since digital information systems are empowering people with the information, they need to make well-informed decisions, new forms of organizing work are evolving. But it is our human need for economic efficiency and flexibility, as well as personal happiness and fulfilment, that is driving this revolution. Automation enables faster implementation, execution, and scaling of massive amounts of data, resulting in less time consumed and lower overhead expenses for businesses. Furthermore, because of the pandemic, business operations are leaning towards robotic process automation and reshaping.

Technological advancements have prompted businesses to face new challenges to meet changing consumer demands and requirements. RPA adoption has recently captured the attention of many SMEs and large organisations. This can be attributed to RPA's ability to deliver seamless operations while also adding significant value from resources. Organizations all over the world are constantly looking for ways to automate processes to increase productivity. RPA was designed to reduce iterative tasks by following a set of predefined procedures that do not require knowledge or insights, while the integration of AI allows RPA softbots to function as a knowledge-based dynamic system to work beyond an automated cognitive system.

Skillmine has escalated its RPA services; we use advanced automation tools such as Automation Anywhere, BluePrism, and UiPath to automate operations. Our RPA development team automates complex yet redundant tasks that stifle vital resources, increasing business speed and accuracy. Our customized solutions are designed to augment human-performed tasks with greater speed and accuracy. From data-driven analytical tasks to redundant routine tasks, our RPA solutions seamlessly integrate into existing infrastructure to ensure high-quality products with minimal disruption.

Looking at the current RPA market and the latest business developments, we can anticipate some future scenarios. Artificial intelligence (AI) is yet another widely used technological solution that is sweeping the globe. When these two titans join forces, we should expect a superfine and well-automated solution for the entire industry.

We deliver cutting-edge technologies that optimize the productivity of your teams in an effortless and cost-effective manner as experts in Robotic Process Automation development. The product you receive is as intended, on schedule and within budgets, thanks to the intuitive user interfaces and powerful processing capabilities.
