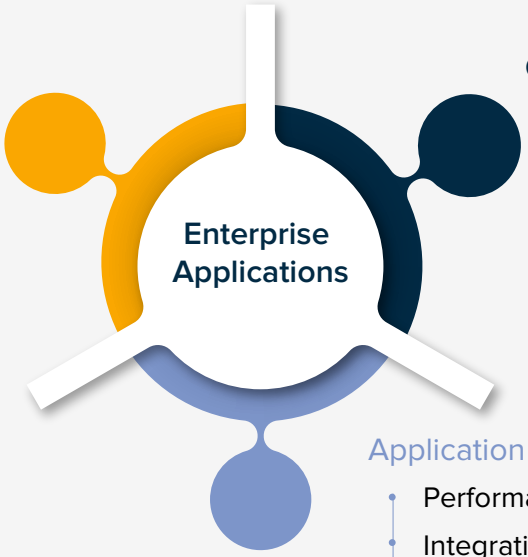
ENTERPRISE APPLICATION DEVELOPMENT

Skillmine
Technology • Consulting • Services

Modern technologies are paving the way for companies and agencies to develop at a very fast pace. For companies, enterprise app development is bringing in comprehensive capabilities such as automation, machine learning, and artificial intelligence. A tailored application software allows a company to manage several aspects of the business, including enterprise administration and staff cooperation.

Enterprise application development is the process of creating a software application specifically for business purposes. This app is the outcome of sophisticated development tailored to the specific needs of the companies' requirements, and all system apps are connected to the cloud network.

Why Enterprise Applications?



Application Development

- Enhancements
- Migration
- Re Engineering
- Development
- Requirement Engineering

Quality Assurance

- Functional Testing
- Compatibility Testing
- Test Automation
- Performance Engineering

Application Support

- Performance Optimization
- Integration
- Bug Fixes
- Maintenance
- Production Support

Our Services

- Multi-tier Web Enabled Applications
- Individual/ERP System Development
- Animated/Games Development
- Offshore/Onshore Project Development
- Android & iOS Development
- Best of UI Design, infographics

Why Skillmine?

01 Serverless application Development with modern open stack, native and hybrid models.

02 Micro service architecture.

Distributed mechanism with web app and mobile. 03

Modernization and Transformation of legacy ERP. 04

05 Your product development partner.

06 Moving from traditional MVP (Minimum viable product) to MLP (Minimum Lovable product).

Application Development Process

Prepare

- Analyze Objectives & Ecosystem
- Requirement Analysis & Gathering
- Mapping challenges
- Roadmap implementation

Design

- Prototyping & Wireframing
- Software Architecture Design
- Design Solution
- User training outline

Build

- Design to Source Code
- Data Migration
- Quality Check & Testing
- Bug Identification & Resolution

Deploy

- User Acceptance Testing
- Executing a Build
- Continuous testing
- Provide log data & alerts

Support & Maintenance

- Software updates
- Bug Defect fixes
- Preventive maintenance
- Feature Addition

Implement

- Support Release Cycle
- Handover of Software solution,
- documents & Configuration
- User training
